Modern drug discovery research demands unique drug target validation studies be completed in a timely manner. Together, Taconic, TaconicArtemis and PhenoPro meet that demand. Our seamless, integrated approach takes you through the process of genetically engineered mouse model creation, breeding and phenotyping—quickly and efficiently.

When you choose our Drug Target Validation Solutions, you gain the expertise and insight of three industry leaders in their respective fields. Our combined, extensive experience in custom mouse model generation, breeding and delivery of models, and phenotyping enables us to greatly reduce the timeline from design to validation. Our integrated approach eliminates the need for you to manage the project and dramatically accelerates the process—greatly speeding the delivery of the models your research depends on.

The benefits of our Drug Target Validation Solutions are easy to realize.

Realize the Benefits

- **End-to-End Solution.** Traditional drug validation studies involve engaging different experts to handle different aspects of the project. The team of Taconic, TaconicArtemis and PhenoPro offers a better alternative: serving as your one-stop solution and simplifying the project. Together, we provide an end-to-end solution that ensures the highest quality service, from model generation to phenotypic characterization.
- **Improved Focus.** Using the traditional approach of coordinating multiple experts to manage a large validation project takes time away from your critical research. By offering a turnkey solution, we take on the project management responsibilities—so you can focus your resources on the business of research.
- **Condensed Timeline.** The combination of our breakthrough, proprietary advancements in production techniques and our years of experience translates to a dramatically reduced timeline for you. That means we can deliver on accelerated timelines previously unavailable in the industry.
- **Unrivaled Expertise.** TaconicArtemis is a recognized world leader in custom mouse model generation, with technology and delivery timelines unsurpassed in the industry. Taconic is one of the most respected providers of its kind internationally, providing unrivaled model breeding, testing and distribution expertise. PhenoPro offers the most sophisticated model characterization capabilities available. Together, we serve as your strategic partner—leveraging our expertise to help you complete your research efficiently and effectively.

Find out how our Drug Target Validation Solutions can help you achieve your research goals quickly, accurately and efficiently. Contact Taconic today.
