

# The NOG Portfolio

Extending the Limits of Human Cell and Tissue Engraftment

- ▶ PhD-level field applications scientists provide critical expertise to maximize your success
- ▶ Application data available through collaborations with industry and academia
- ▶ Sold under a simple label license for easy access for internal and contract research

## A flexible platform, exclusive 2nd generation models with specific utility and multiple types of humanized models

### CIEA NOG mouse®

A super immunodeficient mouse with unparalleled ability to engraft human cells and tissues, including human hematopoietic lineages. Applications in oncology, infectious disease, autoimmune disease and more.

### NOG-EXL

Studies involving human myeloid cells, including immuno-oncology and allergy applications; host for acute myeloid leukemia (AML) PDX.

### hIL-2 NOG

Research involving human T cells, including Graft vs. Host Disease, CAR-T cell efficacy studies, tumor infiltrating lymphocytes (TILs).

### hIL-6 NOG

Studies involving human monocytes and macrophages, including tumor-associated macrophages (TAMs); host for multiple myeloma (MM) PDX.

### hIL-15 NOG

Studies involving human NK cells, including immuno-oncology and Graft vs. Host Disease applications.

### B2m-NOG

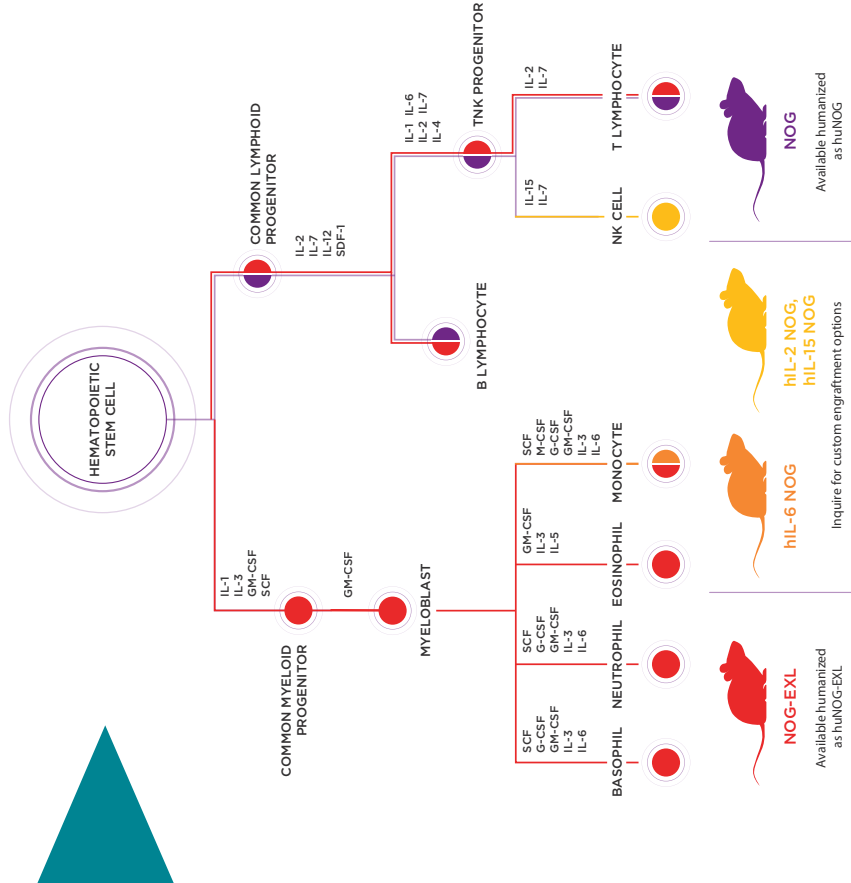

Prolonged study window following engraftment of human PBMCs for immuno-oncology and other efficacy studies.

Complex Experiments **Require Complex Models**
